DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, 38-39, 42, 44, 45, and 131-142, drawn to a three-dimensional image scanner, classified in class 358, subclass 505.
 - II. Claims 5-9, and 11-28, drawn to a 3-D display, classified in class 345, subclass 6.
 - III. Claims 46-107, and 143-16 drawn to calibrating a 3-D imaging system, classified in class 324, subclass 601.
 - IV. Claims 108-130, drawn to method of rendering 3-D images, classified in class 345, subclass 419.
 - V. Claim 147, drawn to diamonds, classified in class 257, subclass 77.
 - VI. Claims 148-153, drawn to a stereoscopic microscope, classified in class 359, subclass 462.
 - VII. Claims 164-160, drawn to multiple recorders, classified in class 346, subclass 44.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as a three-dimensional image scanner, which does not require a 3-D display, as recited by subcombination II. Furthermore, the same statement can be made of all seven subcombinations usable together, in which each single

Art Unit: 2629

subcombination group of claims has separate utility, as seen in the grouping of seven subcombinations above, which does not require the separate utility of any of other subcombinations. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and/or examination burden if restriction were not required because at least the following reason(s) apply:

The separate inventions all require separate classification and require separate search/search queries, which would cause a very serious burden on examination of the claims.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically

Art Unit: 2629

point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to RICARDO L. OSORIO whose telephone number is (571) 272-7676. The examiner can normally be reached on MONDAY-THURSDAY 7:00 am-5:30 PM.
